TITLE	SKILL/JOB RECOMMENDER APPLICATION

PROPOSED SOLUTION

The new students or candidates who wants to search for new jobs from skill/job recommender application first login with their E-mail id and password for registration. After they have login with the application they may found the option for creating the profile from that tab the users can create their profile and hide the details which they decide to hide from third parties using steganographic key and upload using that specific tab. It connects them with the job providers or job providing agencies. It's a job portal where providers can also post their job availability. It provides all categories of job to the users and skilled candidate to the job providers.

If the recruiters wants to access the profile of any particular candidate based on the skill they need, he/she should request for a secret key from that candidate using request tab. After getting that request the candidate can share their secret key. from that shared key the providers can access the secured profile and in return they send a further job offering details.
